## L'usine de Fiorano Modenese

a été créée en 1976.

C'est là que sont fabriqués les produits de la ligne pressée avec des bords naturels, avec une verticalisation jusqu'au plus petit format.

La production est entièrement axée sur le grès cérame, cette usine comme la "plaque tournante du grès cérame pressé".

À l'intérieur de ces hangars, il y a quatre presses qui ventilent leur productivité sur quatre lignes d'émaillage et deux lignes de cuisson à double canal, pour une productivité totale qui peut atteindre 7,5 millions de mètres carrés de produit fini lorsqu'elle est pleinement opérationnelle.

Les principaux formats produits sont les suivants :

30x120, 20x120, 15x60, 30x60, 34x34,  
21,6x21,6, 21,6x43,5, 22x22, 20,3x90,6,  
45x45, 40x60.

Site de production de Fiorano Modenese

**135 Salariés**

**L'usine de Sassuolo** sera acquise en 2021. L'installation est l'une des plus anciennes du district et l'un des symboles de l'histoire de la céramique italienne.

Après une série d'investissements visant à renouveler l'industrie 4.0, nous appelons cette usine le "centre de broyage".

En effet, grâce aux nouvelles presses et à l'intégration de la dernière génération de broyage à sec, nous pouvons produire du grès cérame en 2 cm d'épaisseur et en épaisseur rectifiée traditionnelle.

À l'intérieur de ces hangars, la productivité atteint 4 millions de mètres carrés de produit fini lorsqu'ils fonctionnent à plein régime.

Les formats produits sont les suivants  
60x120 (également 2 cm), 30x120, 20x120, 90x90 (également 2 cm),  
40x80 (également 2 cm),  
60x60 (également 2 cm), 30x60.

Site de production de Sassuolo

**53 Salariés**

# La production du grès cérame

GRUPPO  
**MOMA**  
ceramiche

Le grès cérame représente 92% du portefeuille produits du district.

Les statistiques nationales déclarent qu'en 2022, la production a augmenté de 22.4%, avec un volume de 388.8 millions de mètres carrés.

Les investissements réalisés au cours de ces dernières 4 années ont rendu l'entreprise très compétitive sur le plan de la production en portant son volume de production à 11,5 millions de mètres carrés.

Aujourd'hui, la production figure parmi les premières entreprises du district.

# Les avantages du grès cérame

Par rapport aux matériaux alternatifs (par exemple le vinyle, le parquet ou les stratifiés), le grès cérame possède des caractéristiques qui sont aujourd'hui encore inégalées, comment:

- **Résistance** : C'est un matériau dur, qui résiste bien à l'abrasion, aux rayures et aux ruptures.
- **Imperméabilité** : la densité du produit évite la possible pénétration des liquides.
- **Sécurité** : il ne peut pas prendre feu parce qu'il est incombustible, en effet il a la capacité d'inhiber les flammes.
- **Hygiène** : C'est un matériau incapable de retenir les germes, les poudres et les poussières.

- **Éclecticisme** : pour élargir les possibilités de choix les carreaux sont produits dans une grande variété de formats. Ils peuvent mesurer seulement quelques centimètres, un mètre ou encore plus.
- **Polyvalence** : le grès cérame permet d'avoir dans la maison tout le charme d'un matériau cher comme le marbre ou le bois à un coût nettement inférieur que "l'original".
- **Économicité** : en compétition avec d'autres types de matériaux, la céramique surpasse les autres pour sa rentabilité

L'**usine de Finale Emilia** concentre toute la puissance  
puissance de la production de  
matériaux de revêtement.

Le revêtement est le trait d'identification de Moma et c'est l'ADN qui nous  
permet aujourd'hui d'être un producteur presque monopolistique en Italie.  
L'usine est la première en Italie en termes de volume et l'une des  
premières en Europe.

Quatre lignes de production, huit fours (4 pour le séchage et 4 pour la  
cuisson), cinq presses et quatre presses numériques pour l'émaillage  
permettent de produire jusqu'à 12 millions de mètres carrés par an.  
Le processus définit une offre à deux volets : la double cuisson  
traditionnelle issue de la terre 0 km de la zone et le corps blanc fin qui  
aura la valeur ajoutée du broyage à sec d'ici 2022.

Les formats produits sont les suivants : 20x20, 20x45, 20x40, 20x50,  
20x60, 25x33, 25x40, 25x60, 25x75 (corps blanc rectifié et corps blanc  
traditionnel), 30x60, 25x75 (corps blanc rectifié et corps blanc  
traditionnel), 25x75 (corps blanc rectifié et corps blanc traditionnel).  
corps blanc traditionnel), 30x60 (uniquement corps blanc rectifié).

# La production de faïence céramique

GRUPPO  
**MOMA**  
ceramiche

Selon les statistiques nationales de Confindustria Ceramics (ISN 2022), le district italien a produit quantitativement 16 millions de mètres carrés de double cuisson à cycle complet.

Par rapport à 2020 (Covid), 2022 enregistre une nouvelle augmentation de la production de 3,4 %.

Notre production atteint 12 millions de mètres carrés de double cuisson et, sur la base des statistiques susmentionnées, Moma serait en mesure de couvrir 75 % de la demande.

Importantes économies d'énergie dans les processus et la production grâce à la récupération de la chaleur

Efficacité du processus de broyage et économies sur la consommation de production

Aucune eau n'est utilisée dans le processus de production de la pâte, ce qui permet d'économiser 100 % de H<sub>2</sub>O.
